

Fukushima Daiichi Plant-UPDATE:

Referring to the situation at the Fukushima Nuclear Power Plant in Japan, the company's initial instruction was to keep a distance of 250 NM of Fukushima to ensure its crew safety-even though the official/international/national authorities have recommended a 20 KM distance since March 15th.

Now, the company feels comfortable, after monitoring closely the situation, to alter its initial instruction and we would like you to keep a minimum distance of **100 NM of the Fukushima**.
The relevant update has been sent to all the vessels.
